

Debunked!

Private Bushfire Shelter Building Regulations overturn misinformation and misconceptions in the marketplace

You may know private bushfire shelters as bushfire bunkers.

The Victorian Government is moving ahead of National Building Regulations, by bringing in new interim regulations. The new interim building regulations will assist to improve consumer information about private bushfire shelters and help eliminate products that could be unsafe.

All private bushfire shelters sold and constructed in the State of Victoria must now comply with the criteria set out in the regulations. The regulations cover areas such as fire resistance, structural stability, access and egress. You will need a building permit and may need a planning permit.

Ask your local council.

For those who already have installed a bunker we urge you to consider its safety in light of the regulations. You may wish to contact a registered fire safety engineer for advice.

Don't rely on a shelter to save your life; it should only form part of your overall fire plan – heed the CFA's messages of Prepare. Act. Survive. Private bushfire shelters are a last resort.
